

Proposed Mixed-Use Corridor Amendment

CivicLens Synthetic Policy Input — Bengaluru Demonstration Scenario

SYNTHETIC DEMONSTRATION DOCUMENT

This document is fictional and created only for the CivicLens hackathon prototype. It is not a government notification, council record, or legal instrument.

1. Purpose

This hypothetical proposal demonstrates how CivicLens can compare an existing planning framework with a proposed policy change and trace the change to affected locations and stakeholders.

2. Proposed change

The proposal would permit selected commercial activities along designated mixed-use corridors in the demonstration area, subject to road-width, parking, pedestrian-safety, and access conditions.

For demonstration purposes, the affected corridor is defined as a 1.5 km stretch of Outer Ring Road frontage between two fictional reference points: Junction A and Junction B.

Existing low-intensity residential properties within 100 metres of the corridor are treated as potentially affected locations for impact analysis.

3. Conditions

Commercial activity would require compliance with applicable planning and building requirements.

No assumption is made that the proposal is legally approved; approval is intentionally left as an unresolved case for CivicLens to flag.

The proposal asks the reviewing authority to consider traffic generation, parking demand, pedestrian safety, noise, and accessibility before implementation.

4. Stakeholders

Potentially affected stakeholders include residents, shop owners, property owners, pedestrians, public-transport users, delivery operators, and local planning authorities.

5. Evidence hooks for CivicLens

Key retrieval terms include: mixed-use corridor, commercial activity, road width, parking, pedestrian safety, 100 metres, Junction A, Junction B, stakeholder impact, and approval status.
