

Council Discussion and Resolution — Demonstration Case

CivicLens Synthetic Policy Input — Bengaluru Demonstration Scenario

SYNTHETIC DEMONSTRATION DOCUMENT

This document is fictional and created only for the CivicLens hackathon prototype. It is not a government notification, council record, or legal instrument.

1. Meeting context

This fictional council record is designed to test CivicLens's ability to connect policy language with discussion context and unresolved evidence requirements.

2. Agenda item

Agenda Item 7: Consideration of a proposal to allow additional commercial activity along a designated mixed-use corridor, subject to planning and mobility safeguards.

3. Discussion summary

Members discussed possible economic benefits for local businesses and concerns about congestion, parking spillover, pedestrian safety, and changes to residential character.

A planning representative requested that transport and parking evidence be reviewed before any final implementation decision.

A resident representative requested publication of the affected corridor boundaries and a clear explanation of which properties and streets could experience changed activity.

4. Demonstration resolution

The council discussion records that the proposal may proceed to further assessment, but does not itself constitute final legal approval.

The planning authority is asked, in this fictional scenario, to prepare an impact assessment covering traffic, parking, pedestrian movement, noise, and affected stakeholders.

5. Open questions

Is the proposal approved? Which exact parcels fall inside the affected area? Is the available road capacity sufficient? What evidence supports the expected impact? CivicLens should identify these as verification tasks rather than inventing answers.
